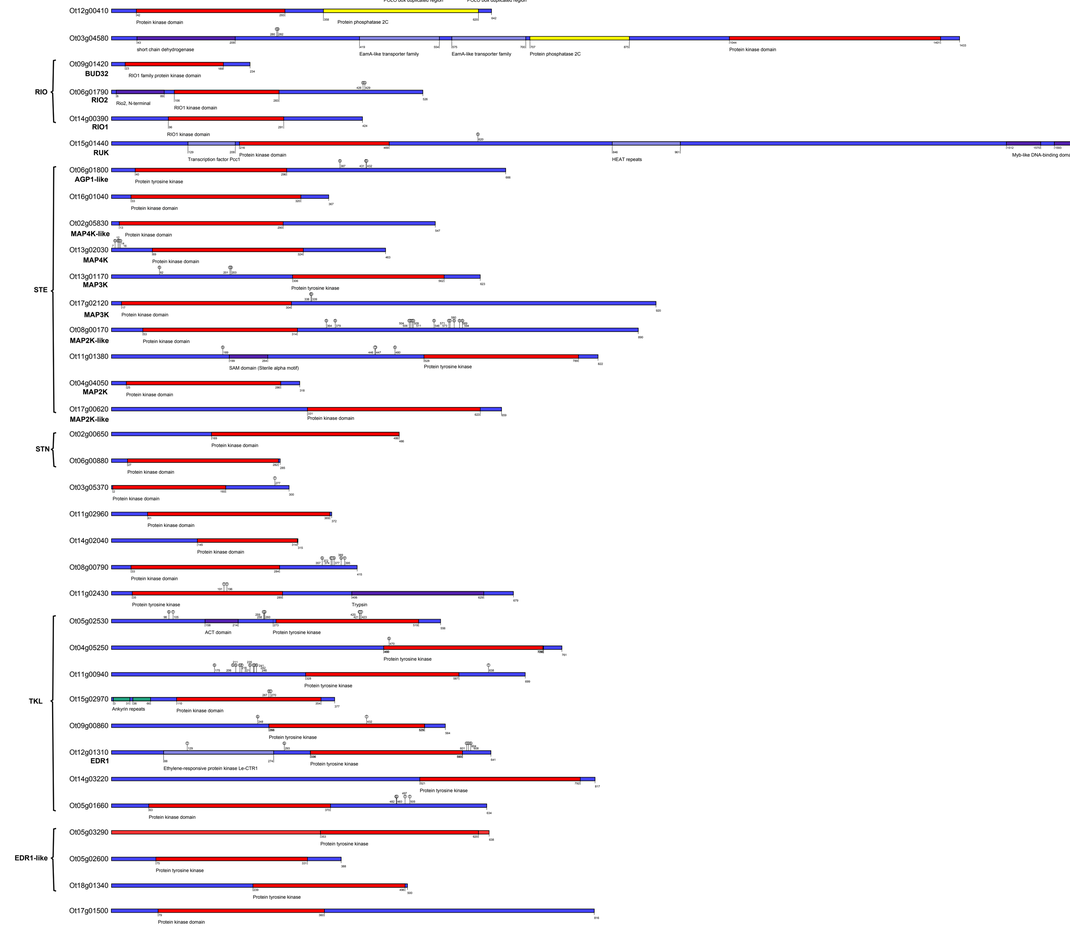
Domains and phospho-sites in *O. tauri* kinases


The following domain diagrams are based on sequences from the 2006 release of the *O. tauri* proteome, with the gene-model corrections supplied in Supplemental Figure S2. Domains were detected by hmmr using PfamA (downloaded in Oct-2013). Experimentially observed phosphorylated sites are from peptides shown in Supplemental Table S1. Additional information on these kinases and their categorisation can be found in the table in Supplemental Table S2, which is in the same order as the proteins below.
